## Ti Gr.12 price movement analysis: Impact of rising nickel

〈Ti Gr.12 price graph, 3 months〉

- From March 3, 2025 to March 7, 2025, the price of Ti Gr.12 increased by \$0.01, from \$11.47 to \$11.48.
- The main cause of this price change is the increase in the price of nickel. Nickel is one of the main components of the Ti Gr.12 alloy, so an increase in the price of nickel has a direct impact on the price of Ti Gr.12.

## Background on the rise in the nickel price

(Ni price graph, 3 months)

- The nickel price increased by \$0.45 from \$15.60 to \$16.05, a result of a combination of economic factors.
- The most significant factors are the global market shock from the US announcement of additional 25% tariffs, which boosted metal prices, the weaker US dollar, which helped drive commodity prices higher, and nickel supply concerns in Ontario, Canada. Ontario Premier Doug Ford stated that the province was prepared to divert nickel supplies to other markets in response to U.S. trade policies, which raised concerns about disruptions to nickel supplies in the U.S. and stimulated price increases.

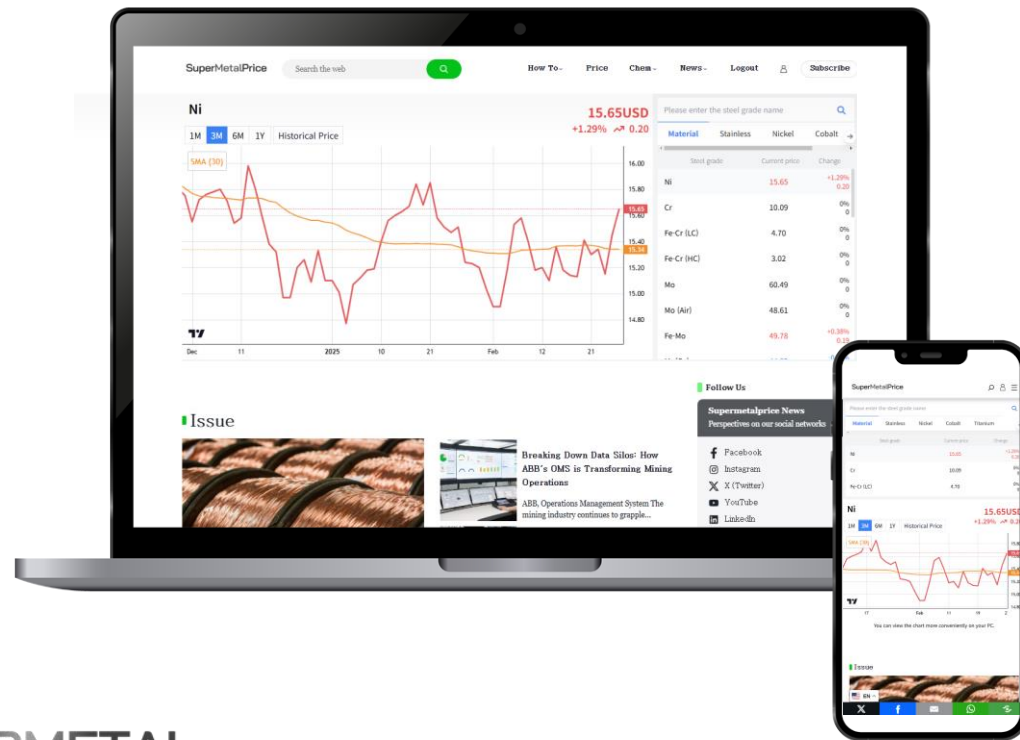

## Ti Gr.12 Price Outlook

- The price of Ti Gr.12 increased by \$0.01, influenced by the increase in the price of nickel, but the price of titanium is likely to adjust in the future due to the decrease and maintenance of the price of titanium.
- However, the increase in the nickel price will act as a supportive factor for the Ti Gr.12 price.
- Therefore, the Ti Gr.12 price may remain relatively stable over the next few weeks as the decrease in the titanium price is offset by the increase in the nickel price. However, if the increase in the nickel price continues, the Ti Gr.12 price may increase in the long term.
